

**At ScriptWorks, quality is much more than just a word.** Our commitment to compounding quality is absolute, and it shapes every procedure and decision we make. Quality can be defined in many ways, but we assess ours through three critical categories: Purity, Precision, and Expertise.

## Purity

- Our chemicals come exclusively from trusted, FDA-approved and inspected facilities
- Our chemical handling protocols have been reviewed and approved by PCAB, The Pharmacy Compounding Accreditation Board
- Each chemical is carefully evaluated by our team of quality assurance pharmacists
- Rigorous testing protocols ensure our products are exactly what your physician ordered

## Precision

- Every compound undergoes a 30-point inspection before it's dispensed
- We compound using the most advanced equipment available
- We achieve superior uniformity using our dual asymmetric centrifuge mixer
- Our compounding protocols have been reviewed and approved by PCAB
- Our equipment is routinely calibrated by experts and inspected by the state
- We routinely perform potency standard testing on our compounded medicines
- We validate our technicians on every dosage through rigorous testing protocols

## Expertise

- Our staff are fully licensed and receive regular training on USP pharmacy guidelines
- Our pharmacists and technicians must meet ScriptWorks standards for quality
- Pharmacists research chemical properties and interactions as patient safety is critical
- ScriptWorks creates innovative compounding medicine that improves patient outcomes
- Our twenty years of compounding knowledge guides every formula and prescription

We put the all in quality.
